The Tier Classification System refers to a benchmarking system from Uptime Institute to determine the availability, or uptime, of a data center. A number of factors determine what tier a data center falls under, including: power, cooling and ancillary data center systems. Each higher Tier delivers more uptime, data center performance, and requires more investment. Data centers range from Tier I to Tier IV, with each tier incorporating the lower tier's requirements. Each tier is progressive, with Tier I being the simplest and Tier IV being the most resilient. Tier III is a common commercial solution for colocation and wholesale data center service providers. Tier IV data centers are designed for risk averse businesses with mission critical applications.
