Abstracts

Geocells are strong, lightweight, three dimensional systems fabricated from ultrasonically-welded High Density Polyethylene (HDPE) strips that are expandable on-site to form a honeycomb-like structure. Geocells are filled with compact non-cohesive soils which are confined within the cellular walls. Geocells are also known as cellular confinement systems. They are three dimensional mats that resemble a honey comb structure and is made of high density polyethylene, polypropylene, polyester or other polymeric alloys. Geocells are mainly used in the construction sector in the areas related to earth reinforcement, slope protection, channel protection, load support and tree root protection.

The Geocells market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
