Abstracts

Hadoop is a distributed system infrastructure developed by the Apache Foundation.

Users can develop distributed programs without knowing the underlying details of the distribution. Take full advantage of the power of the cluster for high-speed computing and storage. Hadoop implements a distributed file system (Hadoop Distributed File System), referred to as HDFS. HDFS is highly fault-tolerant and designed to be deployed on low-cost hardware; it also provides high throughput to access application data for applications with very large data sets. . HDFS relaxes the requirements of POSIX and can stream access data in file systems. The core design of Hadoop's framework is HDFS and MapReduce. HDFS provides storage for massive amounts of data, while MapReduce provides calculations for massive amounts of data. Hadoop Distribution is a commercialization of Hadoop, but some are open source.

The Hadoop Distribution market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
