Hemophilia is a rare disorder in which patient's blood doesn't clot normally because it lacks sufficient blood-clotting proteins (clotting factors). If patients have hemophilia, they may bleed for a longer time after an injury than patient would if your blood clotted normally. Several different types of clotting factors are associated with different varieties of hemophilia. The main treatment for severe hemophilia involves receiving replacement of the specific clotting factor that you need, through a tube placed in a vein.
