Human machine interface (HMI) software gives machine operators a way to interact with and manage a system. This interaction is through a graphical user interface (GUI), which facilitates information exchange and communication between two types of HMIs; a supervisory level and a machine level. Generally, HMI software is designed for either machine level HMI or supervisory level HMI, with applications suitable for both types. These software applications are expensive at the outset, but can lower long-term costs and reduce redundancies in the long run.

The HMI Software market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
