A wireless router is a device that enables wireless network packet forwarding and routing, and serves as an access point in a local area network. It works much like a wired router but replaces wires with wireless radio signals to communicate within and to external network environments. It can function as a switch and as an Internet router and access point. A Range Extender, WiFi Booster or WiFi Extender is a device that repeats the wireless signal from your router to expand its coverage. It functions as a bridge, capturing the WiFi from your router and rebroadcasting it to areas where the WiFi is weak or nonexistent, improving the performance of your home Wifi.
