## **Abstracts**

The hot-rolled steel sheet is made of continuous casting slab or slab as raw material, heated by a step-type heating furnace, descaled by high-pressure water, and then enters the rough rolling mill. The rough rolling material passes through the cutting head and the tail, and then enters the finishing mill to implement the computer. The rolling is controlled, and after the final rolling, the laminar cooling (computer controlled cooling rate) and the coiler are taken up to become a straight hair roll. The head of the straight hair roll is often in the shape of a tongue and a fishtail. The thickness and width are inferior. The edges often have defects such as wave shape, a folded edge, and a tower shape.

The Hot Rolled Carbon Steel Plates market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
