Abstracts

Human platelet lysate (HPL) is a non-animal derived cell culture growth supplement obtained from blood platelets after freezing and thawing. HPL contains abundant growth factors and cytokines necessary for cell growth and proliferation. Platelet lysate can be used as a source of growth factors to replace bovine serum in cell culture medium. Replacing bovine serum with HPL allows expansion and clinical grade production of functional mesenchymal stromal cells by removing the risk of xenogeneic immune reactions and transmission of bovine prion and viral pathogens.

The Human Platelet Lysate market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
