Abstracts

Anti-scaling chemicals are surfactants that inhibit chemical reactions and help prevent scaling in three major ways, namely threshold inhibition, crystal modification, and dispersion. Antiscalants get adsorbed on the surface of colloidal particles or crystals and have the ability to impart a high anionic charge to the crystals so that they can easily be separated. These surface active agents have superior properties and have low prices, which have resulted in their increased adoption in end-user industries such as oil and gas, power, and mining.

The Industrial Anti-scaling Chemicals market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
