Abstracts

Industrial gases are supplied in a range of different cylinders depending on the properties of the gas. Some are delivered at high pressures, while others are offered only at low pressures. Thus, the properties of an industrial gas decide the way in which it is supplied to the customer. For example, gases such as nitrogen, oxygen, hydrogen, and argon can be readily compacted into a cylinder at pressures up to 200 bar.

Metal fabrication covers a wide range of activities from general welding to highly specialized laser welding processes. Companies in this industry require a responsive, flexible, single-source partner that supports the full application and equipment spectrum, combining both traditional and new cutting, welding and coating processes.
