The principle of electromagnetic induction heating is that alternating current generated by induction heating power generates alternating magnetic field through inductor (coil). The magnetic conducting object is placed in it to cut alternating magnetic force line, which generates alternating current (eddy current) inside the object. The eddy current makes the atoms inside the object move irregularly at high speed, and the atoms collide with each other and friction to produce thermal energy, thus heating. Industrial Induction Heater is the equipment that works on the principle of electromagnetic induction heating.

The Industrial Induction Heater market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
