Abstracts

The vision sensor first performs the inspection by locating the part in the image and then by looking for specific features on the part. Once the field of view (FOV) is set, the operator can run the vision tool over the entire range of targets to examine the presence, integrity or orientation of multiple features in a single image. Even if the data output is binary, aggregated data can be used downstream to improve the process and perform diagnostics on specific units of work.

The Industrial Vision Sensors market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
