## **Abstracts**

Pheromone are the chemical molecules secreted by insects in the environment. The pheromones are released to signal their other mates for a food source or as an alert. Thus, these pheromones acts a communication between the insects spread across the field. Integrated pest management (IPM) is a method or approach towards preventing damage from pests in the farm field. IPM pheromones are synthetically manufactured which exactly imitates the naturally secreted pheromones. Thus, it helps in growing the crops in a healthy manner. The pheromones can be classified based on the interaction medium as aggregation, alarm or sex pheromones. IPM pheromones create an unfavourable situation for the further growth of pest.
