KVM over IP is a server management technology designed to support user input and output on a system over a network connection. This eliminates cumbersome and limited KVM hardware switches and allows administrators to configure and monitor a large number of local or remote systems using virtually any Web browser with standard ActiveX or Java plug-ins. In fact, KVM over IP allows administrators to handle many system management tasks in local and remote data centers without leaving the office. This eliminates travel time and expense at remote sites and greatly reduces support response time.

The KVM over IP market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
