## **Abstracts**

Laparoscopy is an operation performed in the abdomen or pelvis using small incisions with the aid of a camera. Laparoscopic surgery, also called minimally invasive surgery (MIS), banded surgery, or keyhole surgery, is a modern surgical technique. There are a number of advantages to the patient with laparoscopic surgery versus the more common, open procedure. These include reduced pain due to smaller incisions, reduced hemorrhaging and shorter recovery time. The key element is the use of a laparoscope, a long fiber optic cable system which allows viewing of the affected area by snaking the cable from a more distant, but more easily accessible location.

The Laparoscopic Surgical Instruments market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
