Biometrics is a technology that measures and analysis physiological or behavioral patterns of humans for authentication or identification purposes. Fingerprints, irises, voice patterns, and the spatial geometry of the face are some of the most widely used characteristics for biometrics recognition process. Physiological patterns include fingerprints, face recognition, DNA, palm print, hand geometry, and iris recognition, whereas behavioral patterns are signature, keystroke dynamics, and voice recognition. The data obtained from these sources are used for security and authentication purposes. Biometrics is mainly used for banking authentication, law enforcement, and providing physical access. It helps provide an extra layer of security for data access and individual identification.
