Abstracts

The dimmer switch was developed to meet the different needs of people at different times for the brightness of the light. In principle, the electronic dimmer switch controls the degree of conduction by controlling and changing the phase angle of the thyristor. The dimmer switch is the time when the power source flows through the load, thus changing the input voltage and current of the electric light source to obtain light output of different intensity, and the single fire line input wiring mode can directly replace the existing wall switch.

The Lights Dimmer Switches market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
