Managed Application Hosting (MAH) offers all the features of managed hosting?Managed hosting is an IT provisioning model in which a service provider leases dedicated servers and associated hardware to a single client. The equipment is at the hosting provider's facility or at a subcontracted facility, such as Amazon Web Services, and managed there by the service provider. Managed hosting differs from other dedicated hosting in that the service provider administers the hardware, operating systems and system software. The client usually has administrative access but as a rule rarely uses it, instead interacting with the leased system through a Web-based interface. Typically, the hosting provider is responsible for setting up and configuring hardware, installing and configuring software, technical support, patch management, system maintenance, monitoring and updates.
