Medical implants are the devices or the tissues that are placed within the body and are utilized to perform functions of missing parts. These implants are generally prosthetics that replace a removed or absent body part or support the body. Implants are made from bone, skin, metal, plastics or other materials. Sterilization of implants is crucial as these devices are to be implanted in the body. In case of infection, many complications can severely affect the patient culminating to mortality. Therefore, sterile packaging of implants is necessary to reduce the risk of post-procedure complications.
