## Abstracts

Memristor is an electrical circuit consists of memory resistor. It limits or regulates the flow of electrical current in a circuit and remembers the amount of charge that has previously flowed through it. Memristor has two key properties, the resistance of memristor changes with the change in the direction of current flowing through it and when the power is turned off, the memristor can retain its resistance value till the time power is resumed again.

The Memristor market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
