Abstracts

MEMS packages must not only protect the often-fragile mechanical structures and provide the interface to the next level in the packaging hierarchy, but they must also be fabricated in a cost effective manner to allow for affordable mass-produced circuits. Since several thousand RF switches are simultaneously fabricated on a single substrate, a cost effective packaging process should perform most of the packaging steps at a wafer level, before separation into discrete circuits.

The MEMS Packaging market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
