A microturbine is a small scale power generating equipment that produce electrical power by burning either gaseous or liquid fuels. The combustion of these fuels in the turbine produces high speed rotation of the turbine shaft, which then turns an electrical generator for producing electrical power. Microturbines can work using an array of liquid and gaseous fuels including natural gas, biogas, sour gases, gasoline, diesel, kerosene, and heating oil.

The Microturbines market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
