Abstracts

The human body is the entire structure of a human being. It is composed of many different types of cells that together create tissues and subsequently organ systems. They ensure homeostasis and the viability of the human body. It comprises a head, neck, trunk (which includes the thorax and abdomen), arms and hands, legs and feet. A mind is the set of cognitive faculties that enables memory, consciousness, perception, thinking and judgement. A spirit is a supernatural being, often, but not exclusively, a non-physical entity; such as a ghost, fairy, or angel. The concepts of a person's spirit and soul, often also overlap, as both are either contrasted with or given ontological priority over the body and both are believed to survive bodily death in some religions, and 'spirit' can also have the sense of 'ghost', a manifestation of the spirit of a deceased person.
