Mining can be carried out at the surface as well as underground. Rock drills, scoops, loader, hydraulic shovels, and draglines are used constantly in the operations of mining which causes wear and tear. This causes decrease in downtime and life of the equipment. Hence, mining lubricants play an important role in mining activities. In mining, the anti-wear performance and the need of good corrosion protection are mainly required to protect the metal surface. The mining lubricants are used to reduce costs by extending drain intervals, improving energy efficiency, and increasing equipment life.

The Mining Lubricant market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
