Motion tracking, or mo-cap, is a process of digital recording of people's or objects' movements. Motion capture technology is widely used in entertainment, notably in gaming industry and filmmaking. It is also called performance capture if it refers to designing more complex patterns, such as facial expressions or finger movements. The actions of people are recorded and this information is used to create a 3D digital model. The movements are scanned many times per second and are broadcasted to the digital environment. As a result, the character reproduces the human's movements in real time.
