Abstracts

Optical fiber refers to the medium and technology that is used to transmit information through a plastic or glass strand from one source to another. The information is transmitted through optical cables as rapid light pulses. The receiving end of a fiber optic transmission translates the light pulses into binary values. An optical fiber offers numerous advantages such as increased bandwidth, decreased size and weight, electromagnetic interference immunity, data security, electrical isolation, and others. These are used in communication applications, which include telecom, utility, community access television (CATV), military, and others and in non-communication applications such as sensor, fiber optic lighting, and others.

The Optical Fibers market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
