Abstracts

Portable Evaporative Coolers is a device that cools air by evaporating water.

Evaporative cooling differs from typical air conditioning systems in that it uses a vapor compression or absorption refrigeration cycle. Evaporative cooling uses the fact that water will absorb a relatively large amount of heat for evaporation (i.e., it has a large evaporation enthalpy). By the phase change (evaporation) of liquid water to water vapor, the temperature of the dry air can be significantly reduced. This can use less energy to cool the air than cooling. In extremely dry climates, evaporative cooling of the air has the added benefit of using more moisture to regulate the air and making the building occupants feel comfortable.

The Portable Evaporative Coolers market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
