Abstracts

Yogurt is a creamy, fermented dairy product. Probiotic yogurt is any yogurt that contains live, active bacterial cultures. Most natural or regular yogurt is probiotic. A normal serving of yogurt contains billions of bacteria, which many people believe to be beneficial to the body. Prebiotics are a type of non-digestible fiber compound. Prebiotics work to stimulate the growth of probiotics that colonize our gut microflora. Since they act like food for probiotics, prebiotic compounds help balance harmful bacteria and toxins living in the digestive tract, which has numerous health implications, including improving digestion.
