A process automation is used to automatically control a process such as chemical, oil refineries, paper and pulp factories. A process automation often uses a network to interconnect sensors, controllers, operator terminals and actuators. Process instrumentation is used in water/wastewater treatment and industrial manufacturing facilities to measure things like pressure, level, flow, pH, turbidity, conductivity, temperature, humidity, force, speed and other variables in the process, which is the fluid or material that is being treated or manufactured as it flows or travels through the system.
