## **Abstracts**

Pulsed electromagnetic field therapy (PEMFT), also known as low field magnetic stimulation (LFMS), and tumor treating fields (TTF) uses electromagnetic fields in an attempt to heal non-union fractures, lioblastomas (brain tumors) and depression. The original PEMF devices consisted of a Helmholtz coil which generated a magnetic field. The patient's body was placed inside the magnetic field to deliver treatment. Today, the majority of PEMF wellness devices resemble a typical yoga mat in dimensions but are slightly thicker to house several flat spiral coils to produce an even electromagnetic field. A frequency generator is then used to energize the coils to create a pulsed electromagnetic field. A wide variety of professional and consumer PEMF devices are sold and marketed as FDA registered wellness devices.

The Pulsed Electromagnetic Field Therapy Devices market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
