Abstracts

Radial drilling is an innovative, economical and environmentally friendly technology that can drill multiple micro-diameter horizontal wells at different depth levels of existing wells. In radial drilling techniques, high velocity hydraulic jet fluid is injected to drill side holes in the reservoir. Here, multiple side holes are drilled from existing wells (also known as parent wells) at different levels or depths. The depth and direction of the micropore diameter to be drilled is based on the economically viable hydrocarbon volume present in the reservoir, which can reduce the cost of radial drilling.

The Radial Drilling market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
