Abstracts

Railway composite materials include carbon fiber, glass fiber, etc. Using composite makes the railways lighter and renders greater resistance to heat, external impact and reduce power consumption by improving overall performance. Various other benefits associated with the reduction of railway weight are lower inertia, less track wear, enhanced stability, and the ability to achieve high speed. With extensive research and cost-effective mass production techniques in place, the demand for composite in railway sector has increased

The Rail Composites market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
