In electrical engineering, power engineering, and the electric power industry, power conversion is converting electric energy from one form to another such as converting between AC and DC; or changing the voltage or frequency; or some combination of these. The power conversion unit for locomotive constitutes of equipment used in locomotives that converts electric or diesel energy to obtain the train drive. The power conversion unit plays an integral role as the electric power supply of a locomotive is AC, and to achieve advantages of the DC series motor, the power is then converted to DC.
