Abstracts

Recycled polyester is a relatively new trend in the eco fashion industry. It's far from sustainable. Recycled polyester is toxic to the earth and the wearer. Among the trend is recycled plastic bottles being turned into fabrics which are considered sustainable to keep from them piling in the landfills. If plastic bottles don't belong in the landfills, they certainly don't belong on the body.

Unlike polyester, recycled polyester uses PET as the raw material. This is the same material that is used in clear plastic water bottles, and recycling it to create the fabric prevents it from going to landfill.

The Recycled Polyester market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
