Remotely operated vehicles (ROVs) are underwater robots that are connected to an operator through a series of cables that transmit command and control signals to and from the underwater vehicle and the operator, allowing for the remote navigation of the vehicle. The evolution of ROV technology has resulted in the ever-growing application in military and defense, scientific research, oil and gas operations. ROVs are equipped cameras, high-frequency image sonar, and lights, which allow the operator to drive the equipment. Additionally, a manipulator, cutting arm, water sampler, and other instruments that measure water temperature and clarity may also be used.
