Abstracts

Where the accuracy of the machine tool is not required, the robot takes over tasks such as drilling, brushing and deburring. This reduces the spindle run time per part. In production operations, this cuts the machining time. On components requiring intensive machining, the robot can also carry out roughing, leaving the machine to take care of the smoothing alone. Robots are particularly easy to operate thanks to their universal, user-friendly interface. Operating, programming and set-up procedures are also exactly the same as the user is accustomed to.

The Robot Machine Tools market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
