Abstracts

Robotic Parking Systems eliminate much of the space wasted in traditional parking facilities by taking people out of the parking process and out of the parking area. An automatic mechanical system picks up cars and transports them to parking spaces. It reverses the process to return the cars to their drivers. This way Robotic Parking Systems utilize much smaller parking spaces and eliminate driving lanes, ramps, lifts, stairs, etc. The Robotic Parking System also eliminates the need for people to be in the parking area. Drivers drop off and pick up cars in open and well-lighted entrances at ground level, eliminating the need to walk through often quite intimidating car parking areas.

The Robotic Parking Systems market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
