A rocket is used to explore space as well as for defense purposes. They are used to transport human and other devices in the space where they are fueled in such a way that they have fast speeds required to travel outside the gravity. Missiles, on the other hand, is a term which is strictly used for just military purposes. They have high speeds are able to navigate through the gravity and friction to reach their target. They both have very high velocities, the ranges are greater but the tasks are different. A rocket needs initial guidance when it is left in the atmosphere and after that follows a straight path which has been programmed while a missile needs constant guidance and is programmed in such a way that it can change its path or quickly follow a new path, this technology is used brilliantly in the ballistic missiles.

The Rocket and Missile market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
