Abstracts

Based on the proposed use, conveyor belts are manufactured using either PVC or rubber. The belt consists of one or more layers of material. Most belts in general material handling consist of two layers. Carcass is the name of the under layer that provides linear strength and shape, while cover is the name of the over layer. Polyester, nylon and cotton are used most often to create the carcass, while a variety of rubber or plastic compounds specified by use of the belt are used to create the cover.
