Satellite-based Earth Observation (EO) is a process of using remote-sensing technique to gather information on the chemical, physical and biological aspects of the earth system. This technique allows the measurement of geophysical parameters of the earth from the orbit with the use of cameras and sensors. The gathered information can be effectively used to monitor and predict cloud cover and climate patterns, detect and assess damage during floods, tsunamis, and other natural disasters, agricultural and usage, petroleum and mineral deposits, availability of water sources. It also facilitates the management of earth's natural resources in a resourceful manner.
