Abstracts

SD-WAN is a response to the shift in business application architecture from the data center to the cloud, allowing enterprises to connect their end-users in a safe and reliable way to their third-party cloud platforms and SaaS applications.

WAN Edge A router is a device that routes packets between different WAN locations, allowing enterprises to access the carrier network. It is also known as a border router, which is different from a core router that sends packets only on a single network. By reducing the dependency on routing protocols, SD-WAN can be used as an overlay to simplify the management of existing WAN edge routers. SD-WAN may also be a replacement for WAN edge routers
