A semiconductor circuit chip is a tiny electronic device consisting of billions of components, such as transistors, capacitors, inductors, transformers, that store, move, and process data. The semiconductor chips are made from semiconductor materials such as silicon and germanium. These materials have semiconducting properties, which enable precise control of the flow of electrical current through them. The manufacturing of semiconductor ICs is carried out by semiconductor foundries.

The Semiconductor Foundry market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
