Abstracts

The single frequency laser, that is, the single longitudinal mode laser, is characterized in that the output laser mode satisfies both the single transverse mode and the single longitudinal mode, and only a single longitudinal mode is oscillated inside the cavity, and the output light intensity exhibits a Gaussian distribution. In addition to the good monochromaticity and directionality of the laser itself, single-frequency lasers have the characteristics of long coherence length and narrow spectral line width that are difficult to achieve with ordinary lasers. It has a wide range of applications in the fields of laser radar, laser ranging, laser remote sensing, laser medical, spectroscopy, optical frequency standards and nonlinear optical frequency conversion.

The Single Frequency Lasers market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
