Snap Disc, or snap action thermostats are ideal in a wide variety of applications because they are highly versatile and customizable. Bimetal-snap-action-discs are temperature-sensitive actuators, which activate an electric contact or cause a mechanical action. The temperatures at which the discs switch on/off are user-specifically determined during manufacture. This results in an economical, reliable and precise switching element. Bimetal-snap-action-discs are made of thermostatic bimetal and have a dome-shaped curvature. When the temperature is increased to the upper snap temperature (TOS), they reach an unstable state and snap into the opposite vault. When cooled to the lower snap temperature (TUS), the Bimetal-snap-action-discs behave conversely. This makes fast and precise switching operations possible and allows for reliable switching of high current in electric applications.

The Snap-Action Bimetal Thermostats and Thermal Switches market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
