Abstracts

Solvent recycling is the process of taking used, dirty solvents and cleaning them until the solvent is returned to its pure form or to any acceptable specification. Used solvents are placed in a solvent recycler and “put through a process that fractionates and distills them from the chemicals that made them dirty those introduced to create a reaction with the solvent.”

Solvent recycling is often a critical economic factor in determining the feasibility of a new project or plant expansion. Environmental regulations, new solvent costs and waste disposal costs can easily exceed the cost of solvent recovery equipment and operation. Solvent recycling and recovery are designed to help facility accomplish two major goals – reducing liquid waste disposal expenses and recycling of customers’ liquid solvent waste such as solvent waste, alcohol waste, blanket wash and liquid cleaning solvents – providing huge economic benefits.

The Solvent Recycling market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
