A spirometer is a respiratory treatment device used for measuring the volume of air exhaled and inhaled by lung. This device is utilized for various reasons like testing pulmonary function. Various lung diseases are eliminated through spirometer. It is able to evaluate the outcome of the treatment and whether it needs to be adjusted or not. It is most appropriate for testing functions of lung before undergoing any surgeries. Spirometer is also able to check if the chemicals in work environment are exerting influence on lung function. It can help find the reason for breathlessness and other lung-related problems.
