Abstracts

The stainless steel magnetic pump is composed of a magnetic pump consisting of a pump, a magnetic actuator and an electric motor. The key component magnetic actuator consists of an outer magnetic rotor, an inner magnetic rotor and a non-magnetic isolation sleeve. When the motor drives the outer magnetic rotor to rotate, the magnetic field can penetrate the air gap and the non-magnetic material, and drive the inner magnetic rotor connected with the impeller to rotate synchronously to realize the non-contact transmission of the power, and convert the dynamic seal into a static seal. Since the pump shaft and the inner magnetic rotor are completely closed by the pump body and the isolation sleeve, the problem of “running, escaping, dripping and leaking” is completely solved, and the flammable, explosive, toxic and harmful medium of the refining and chemical industry is eliminated from leaking through the pump seal. The safety hazards have effectively guaranteed the physical and mental health and safe production of employees.

The Stainless Steel Magnetic Pump market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
