Abstracts

Tantalum capacitors are sub-segment type of electrolytic capacitors. These capacitors are made of tantalum metal which acts as an anode, covered by an oxide layer which acts as the dielectric, surrounded by the conductive cathode. These capacitors are polarized capacitors with superior frequency and stability characteristics. These capacitors have relatively high permittivity dielectric layer which is very thin, and that distinguishes from other conventional and electrolytic capacitors in having lower weight and high capacitance per volume. Because of the advances in technology the tantalum capacitors are used in a wide variety of circuits, electronic gadgets, automotive industry, cell phones and others, most often in the form of Surface Mounted Devices (SMD).

The Tantalum Capacitors market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
