## **Abstracts**

In photography and film photography, a telephoto lens is a specific type of telephoto lens in which the physical length of the lens is shorter than the focal length. This is achieved by using a special lens set called a telephoto lens that extends the light path in a shorter overall design to form a telephoto lens. For a telephoto lens of the same specified focal length, the perspective and other effects of the telephoto lens are the same. Telephoto lenses are often informally referred to as telephoto lenses, although this is technically incorrect: telephoto lenses include telephoto lenses in particular.
