Abstracts

The textile industry generates large quantities of waste from desizing of fabrics, bleaching chemicals, and dyes. This contributes largely to environment pollution. In such circumstances, textiles enzymes are used to foster the development of environmentally-friendly technologies in fiber processing and improving the final product quality. Enzymes are increasingly used in textile processing, largely in the finishing of fabrics and garments. Significant applications include desizing and jeans finishing. Major groups of enzymes used for cotton pre-treatment and finishing processes include hydrolase and oxidoreductase.

The Textiles Enzymes market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
